

# Tips

## Small Electric Vehicle Use

- Know what lithium battery powered equipment is kept on site.
- Designate a charging and storage area for e-bikes, e-scooters and other equipment (outside of the building, out of direct sunlight, and away from exit doors and combustibles).
- Disconnect the chargers when not in use and when the vehicle is fully charged.
- Inspect batteries regularly for signs of damage, cracks, or bulges.
- Ensure that your sprinkler system can adequately protect the building from a fire from EV devices.
- Most lithium-ion batteries can be extinguished by the use of a standard dry chemical extinguisher (Class A-B-C). Review the manufacturer's information to ensure the correct type of extinguisher is being used.
